Bearish crypto market weighed on 1Q26 results

Indonesia's spot crypto transaction value declined to Rp76 tn in 1Q26, down 29% YoY and 36% QoQ, reflecting the broad-based crypto market correction. This weak trading environment translated directly into COIN's top line, with 1Q26 revenue falling to Rp41 bn, down 18% YoY and 48% QoQ, representing 17% of our full-year 2026F. On the bottom line, COIN posted a net loss of Rp20 bn in 1Q26 versus net profit of Rp8 bn in 4Q25. Despite the revenue decline, operating expenses remained largely sticky at Rp65 bn in 1Q26, down only -3% QoQ and up 28% YoY, reflecting the predominantly fixed nature of COIN's cost base. This negative operating leverage dynamic pushed operating profit into negative territory at -Rp23 bn in 1Q26 from +Rp13 bn in 4Q25, with operating margin collapsing to -57% from +16% a quarter prior. Compounding near-term pressure, CFX announced a phased reduction in spot transaction fees: from the current 4bps to 2bps effective 1 Mar-26, before stepping down further to 1bps on 1 Oct-26. The fee reduction, while a short-term revenue headwind, is strategically motivated, as the fee differential between licensed onshore platforms and unregulated offshore platforms has been akey driver of capital outflow.

Structural catalysts underpin our medium- to long-term thesis

Despite the near-term headwinds, we believe the structural investment case remains intact, underpinned by three catalysts. First, a more competitive spot fee structure should incentivize migration of offshore volumes into CFX's infrastructure, a significant opportunity given that an estimated ~75% of total crypto volume by Indonesians is currently transacted offshore and outside the bourse. Second, crypto derivatives market remains deeply underdeveloped in Indonesia at just 0.13x spot crypto volume against a global benchmark of ~4-5x. As the only licensed bourse permitted to offer derivative products, CFX is uniquely positioned to capture this gap, and we view derivatives as the key earnings upside driver going forward. Third, the revised UU P2SK enacted in early June 2026 elevates crypto regulation to the statutory level and is expected to mandate centralized trade execution through licensed bourses, a development that should place CFX at the center of price discovery and order flow.

Valuation

We revise our fair value to Rp1,720/share (from Rp4,870), reflecting downward revision to our near-term earnings forecasts driven by weaker-than-expected 1Q26 results and the phased spot fee reduction through 2026. Meanwhile, COIN's share price has declined sharply by 82% YTD, weighed down by the crypto market downturn and compounded by a weak broader market and macro backdrop. At current levels, we believe the market is pricing in a prolonged bear case that underappreciates the structural volume opportunity, CFX's competitive positioning, and the regulatory tailwinds from UU P2SK. Key risks to our projection are 1) longer-than-expected downturn in crypto market, 2) slower-than-expected offshore volume migration, and 3) lower-than-expected revenue due to competition or lower adoption on both spot and derivative crypto market in Indonesia.

Company profile

Indokripto Koin Semesta (COIN) is a holding company offering two main services through its subsidiaries: 1) crypto bourse under PT Central Finansial X (CFX) and 2) crypto custodian under PT Kustodian Koin Indonesia (ICC). As a fully licensed and government-regulated crypto bourse, CFX is mandated to develop a secure, orderly, and transparent trading ecosystem for crypto assets. In parallel, ICC serves a foundational role in safeguarding customer assets and enhancing post-trade transparency for crypto-asset participants and clearing institutions. Together, these complementary roles form an integrated and resilient market infrastructure essential to supporting sustainable growth and broader adoption of crypto assets in Indonesia.

Since commencing operations in 2024, CFX and ICC have demonstrated operational stability, supported by robust technical readiness and operational excellence, including strong transaction processing capability and the ability to handle large-scale trading volumes on a 24/7 basis. The bourse members currently consist of 24 companies, of which 21 have already obtained permits as Digital Financial Asset Traders (PAKD). In addition, among the 24 bourse members, five members are currently active in crypto derivative transactions.

From an ownership perspective, COIN is ultimately beneficially owned and controlled by a group of Indonesian individuals, namely Andrew Hidayat (through PT Megah Perkasa Investindo), Aaron Ang Nio (through PT Bahana Nusantara Indojaya), Jeth Soetoyo (through PT Teknologi Anak Nusantara), and Ir. H. Budi Mardiono. Notably, Hashim S. Djojohadikusumo, the brother of President Prabowo, acquired a strategic stake in the Company through Arsari Group in December 2025. While Arsari Group is not a controlling shareholder, its involvement reinforces the positioning of COIN within Indonesia's digital asset architecture and strengthens confidence in the long-term development of the regulated crypto market.

Industry review and outlook

Growing crypto adoption despite the ups and downs

Global crypto markets turned bearish in 2026 after a strong 2025 bull run. Bitcoin's average daily price retreated to ~USD76,000 on a YTD basis (Jan–May 2026), down 25.2% from the 2025 full-year average of ~USD102,000, with the latest pricing at ~USD62,000. In Indonesia, the CFX10 Index—the new Indonesian benchmark tracking the 10 largest crypto assets by market cap on the exchange—stood at 742 as of 24 June 2026, also down 34% from its YTD peak of 1,120 on 15 January 2026. The CFX10, currently comprising BTC, ETH, BNB, XRP, SOL, TRX, DOGE, HYPE, BCH, and ADA, consolidates trading data across all CFX bourse members and serves as a more comprehensive benchmark than Bitcoin prices alone. Trading volumes followed suit, with Indonesian crypto trading volume fell toRp76 tn in 3M26, down 29% YoY and 36% QoQ.

Yet the market downturn has done little to investor adoption in Indonesia. As of March 2026, the number of crypto investors reached 21.4mn, up significantly from 12.2mn as of December 2024. Even during 1Q26, the weakest quarter for global crypto prices, the investor base still grew 6% QoQ from 20.2mn as of December 2025. We believe Indonesian crypto adoption remains in its early stage of expansion, with the structural growth trajectory intact despite near-term market volatility.

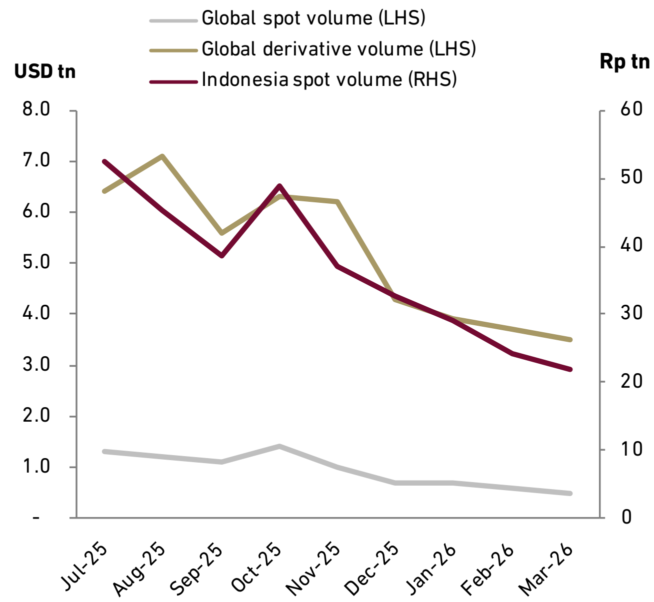
Exhibit 5: Both spot and derivative volume demonstrate clear downward trajectory following its peak in 2025



Source : Company, Coingecko

The enactment of the revised UUP2SK

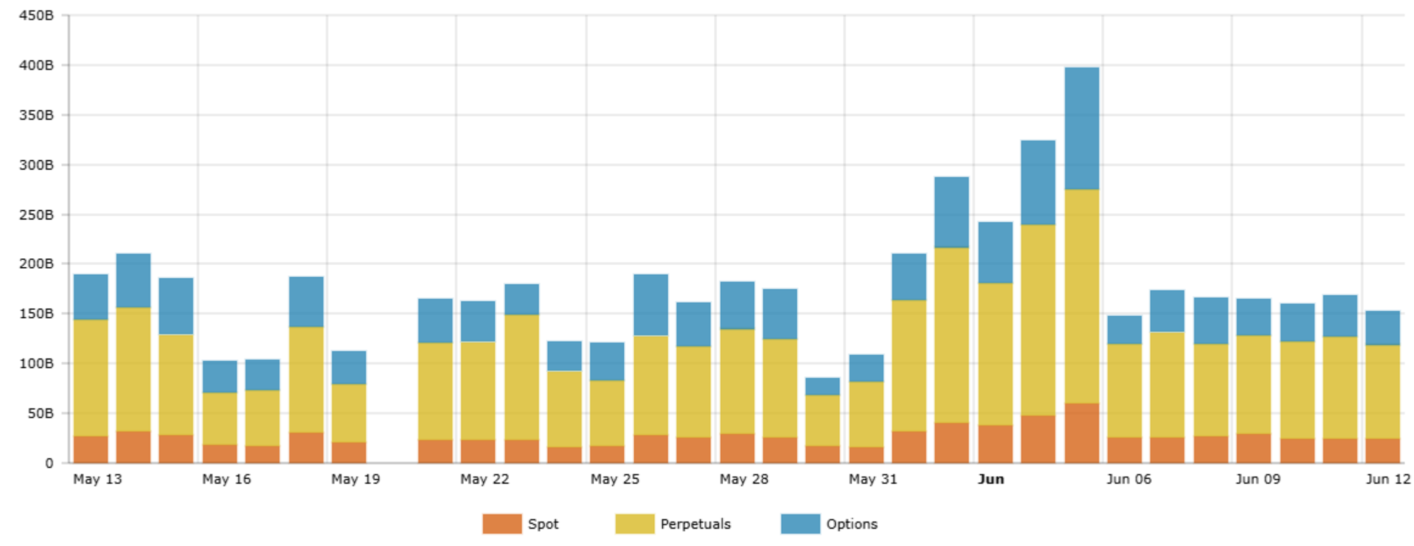
The revised UU P2SK (Law on Financial Sector Development and Strengthening) was officially enacted on 17June 2026, introducing further structural strengthening of Indonesia's crypto regulatory framework. The revision elevates crypto asset regulation to the statutory level, the highest tier of Indonesian law, providing greater legal certainty for the industry and a more robust foundation for long-term growth.

Article 221a Clause 8 of UU P2SK explicitly mandates that all crypto asset activities must be transacted through and/or reported to the crypto asset bourse. We view this as a meaningful positive catalyst for COIN, as the regulation is expected to steer the market toward centralized crypto trading, likely placing CFX at the center of trade execution and price discovery. This supports deeper order-book liquidity and more competitive pricing, which potentially translate into higher trading volumes and stronger monetization through transaction-based fees.Overall, we view this as a medium- to long-term catalyst, as the timeline remains subject toimplementing regulation and transitional periods.

Derivatives market remains a largely underdeveloped market

Globally, crypto derivatives have grown rapidly and now represent approximately 80% of total crypto market volume, with the largest platforms deriving the majority of their trading revenues from derivative products (Exh. 6). In Indonesia, however, the derivatives market remains largely untapped, with derivatives volume equivalent to just 0.13x spot volume as of 1Q26, much lower than the global average at ~4-5x. CFX is uniquely positioned to capture this opportunity as the only licensed crypto bourse permitted to launch and facilitate crypto derivative products. As the derivatives market deepens, we expect this segment to emerge as a key driver of the Company's revenue growth over the medium to long term.

Exhibit 6: Global crypto market trading volume (spot vs. derivatives)



Source : World Coin Index

Capturing the repatriation of offshore crypto transactions

CFX announced a phased reduction in spot transaction fees: from the current 4bps to 2bps effective 1 Mar-26, before stepping down further to 1bps on 1 Oct-26. The fee reduction, while a short-term revenue headwind, is strategically motivated, as the fee differential between licensed onshore platforms and unlicensed offshore platforms has been a key driver of capital outflow, and narrowing this gap is the primary strategic rationale behind the fee reduction.Indonesia's total onshore crypto transaction value stood at Rp482 tn in 2025, while an estimated >Rp1,200 tn (~75% of total volume) was transacted offshore and outside the bourse. A more competitive fee structure should incentivize migration of offshore volumes onto CFX's regulated infrastructure.

Financial analysis and forecast

Bearish crypto market weighed on 1Q26 revenue

Indonesia's spot crypto transaction value declined to Rp76 tn in 1Q26, down 29% YoY and 36% QoQ, reflecting the broad-based crypto market correction amid renewed concerns over the Fed's higher-for-longer rate trajectory. This weak trading environment translated directly into COIN's top line, with 1Q26 revenue falling to Rp41 bn, down -18% YoY and -48% QoQ, tracking at only 17% of our full-year 2026F. On the bottom line, COIN posted a net loss of Rp20 bn in 1Q26 versus net profit of Rp8 bn in 4Q25.

Margin pressure compounded by fixed cost structure

Despite the revenue decline, operating expenses remained largely sticky at Rp65 bn in 1Q26, down only -3% QoQ and up 28% YoY, reflecting the predominantly fixed nature of COIN's cost base. This operating leverage dynamic worked in reverse, pushing operating profit deep into negative territory at -Rp23 bn in 1Q26 from +Rp13 bn in 4Q25, with operating margin collapsing to -57% from +16% a quarter prior.

Near-term headwinds, but the structural volume opportunity remains intact

Despite the near-term headwinds from bearish crypto market and declining fee, we expect COIN's growth story to remain intact over the long term and we expect the Company's earnings to improve in line with continued expansion of the investor base. Importantly, the fee reduction applies only to spot transactions; derivative transaction fees remain unchanged. The spot fee cut therefore represents a volume acquisition strategy for the offshore unregulated market, while the higher-margin derivatives segment remains insulated and poised to drive the bulk of long-term earnings growth. We expect derivatives to contribute significantly to revenue, potentially overtaking spot revenue in the near term and continuing to expand as the derivatives-to-spot ratio deepens alongside broader market participation. We expect earnings to grow at a CAGR of 93% in 2025-29F, driven by the combination of strong transaction growth and economies of scale. This is expected to lead to a compelling ROE of 7-31% in 2027-29F.

Solid positioning; plenty of upside beyond spot and derivative products

Despite the emergence of new licensed crypto bourses in 2026, the Company's competitive position in the regulated market remains firmly established. Under the single-listing rule, CFX's 21 licensed PAKD members cannot simultaneously participate in a competing bourse without first exiting CFX, creating a high-switching-cost moat that is difficult to erode. Furthermore, as the only licensed bourse permitted to offer derivative products, CFX holds a significant competitive advantage in product breadth. This solid positioning provides a strong foundation from which COIN can pursue adjacent revenue opportunities.

Beyond spot and derivatives, COIN's regulated infrastructure and solid market position provide a strong platform to expand its revenue streams as Indonesia's digital asset ecosystem matures.Key areas under active exploration include stablecoin facilitation for remittances and cross-border payments, crypto-asset-backed financing, tokenization of real-world assets (equities, bonds, property, and gold), ICO infrastructure for token-based capital raising, and staking facilitation services through ICC. While these initiatives remain subject to regulatory approvals and market readiness, they collectively represent meaningful optionality beyond transaction-based fee income. This suggests that COIN's long-term monetization potential extends well beyond its current spot and derivatives fee structure.

Rating and Valuation

We revise our projections, which result in fair value of Rp1,720/share (from Rp4,870). This reflects a material downward revision to our near-term earnings forecasts driven by weaker-than-expected 1Q26 results and the phased fee reduction through 2026. Our valuation is derived from a blended valuation approach, equally weighted between DCF and PEG-based valuation. Our DCF is based on an FCFF framework, assuming a WACC of 14.5% and a terminal growth rate of 4.75%. The remaining half of our valuation is derived from a Price-to-Earnings Growth (PEG) multiple, where we apply a target PEG multiple of 2.0x, reflecting COIN's superior growth profile and earnings visibility compared with more mature global bourse peers.

COIN share price has declined sharply by 82% YTD weighed by the downturn in crypto market that affects its financial performance added by overall weak market and macroeconomic backdrop. The share currently trades at 5.9x PBV, slightly above peers' average of ~5x. At current levels, we believe the market is pricing in a prolonged bear case that underappreciates the structural volume opportunity, CFX's competitive positioning, and the regulatory tailwinds from UU P2SK.

Key risks to our projection are 1) longer-than-expected downturn in crypto market, 2) slower-than-expected onshore volume migration, and 3) lower-than-expected revenue due to competition or lower adoption on both spot and derivative crypto market in Indonesia.

Exhibit 17: ESG assessment

Company description	Financial market infrastructure company
ESG-related opportunity or risk assessment	**Environmental** 1. The Company mainly runs its business digitally as its operations are related to blockchain. The environmental impact of those operations could result from energy consumption from this process. 2. The Company's main job as a bourse and custodian will be related to crypto trading activity, which operates at 24/7. Under a large volume of transactions and data, we see this process could become an energy-intensive process. **Social** 1. The Company plays a role in educating the public about crypto assets, with the hope that better knowledge will encourage the adoption of crypto assets in Indonesia. To date, the Company has held seminars featuring various industry speakers, such as representatives from regulators, the crypto bourse, crypto custodian, clearing institutions, and bourse members. 2. The Company through its subsidiaries, CFX and ICC, aimed at developing a secure and transparent crypto asset trading ecosystem, along with secure crypto asset trading in Indonesia by safeguarding assets and providing transparency to all crypto asset customers. That said, we believe the Company plays a pivotal role on the population's trust in crypto assets and contributes to the Indonesian economy accordingly. **Governance** 1. The Company is owned by multiple shareholders, with backgrounds spanning from commodities, business, finance, and technology-related industries. 2. The Board of Commissioners is in the supervisory role of Board of Directors' activities. BoC has two members and one of which is Independent Commissioner. BoD has three members which all come from professional backgrounds. 3. The Company has also established an Audit Committee and Internal Audit Unit.

Board of Commissioners and Directors

Board of Commissioners

John A. Prasetio – President Commissioner & Independent Commissioner
Mr. Prasetio is an Indonesian citizen, aged 74, and holds a Bachelor's degree in Economics from the University of Indonesia (1973). He has served as President Commissioner and Independent Commissioner of the Company since 2024. He is currently Independent Commissioner at PT GoTo Gojek Tokopedia Tbk (2024–present), President Commissioner at PT Central Finansial X (2022–present), Independent Commissioner at PT Sarana Menara Nusantara Tbk (2022–present), and Senior Advisor at Crowe Indonesia (2010–present). Previously, he served as President Commissioner of PT Lippo Karawaci Tbk (2019–2024) and President Commissioner of the Indonesia Stock Exchange (2017–2024).

Aaron Ang Nio – Commissioner
Mr. Nio is an Indonesian citizen, aged 39, with a Bachelor of Science in Accounting and Finance from the University of Southern California (2010).
