Company Background

The founders of PT Abadi Lestari Indonesia Tbk. (RLCO), which was established in 2014, have been processing swiftlet bird nest since 1979. In 2016, RLCO started to export high quality bird nest products under the Lion Nest, Jade Nest, and Crystal Nest brands to countries like China and the US. Today, the Realfood brands with three production facilities in Bojonegoro (East Java), focuses on healthy & functional foods such as bird nest jelly, powdered collagen, chicken broth, and RTD beverages.

Flying Dollar Beneficiary

One of the largest bird-nest-based exporters to benefit from weak local currency. Under the leadership of CEO and owner Edwin Pranata, PT Abadi Lestari Indonesia Tbk. (RLCO), one of Indonesia's largest swiftlet nest processors and exporters, is well-positioned to deliver robust growth, driven by the current weak IDR coupled with sustained demand from export markets and supportive industry fundamentals. Since entering the export market in 2016, RLCO has marketed semi-processed bird's nest products under the Lion Nest, Jade Nest, and Crystal Nest brands, backed by three modern production facilities in Bojonegoro, East Java, which provide scalable capacity and stringent quality assurance, in compliance with their overseas client requirements. Indonesia currently accounts for c. 58% of global swiftlet nest supply, of which more than 85% originate from China and Hong Kong. For RLCO, exports account for c. 80% of total sales with demand continuing to benefit from increasing consumption among affluent younger Chinese consumers and a growing global preference for health-oriented products. Thus, Indonesia's swiftlet nest exports have recorded a solid 10-year CAGR of 15.7% with RLCO booking 3-year CAGR of 18.7%.

Consumer goods segment emerging as key domestic growth drivers. On the local front, the expanding health and wellness market is expected to support RLCO's consumer products business going forward. Indonesia's food supplements market was valued at USD 3.24bn in 2024 and is projected to reach USD 4.72bn by 2030F, creating favorable conditions for continued growth. Subsequently, we expect RLCO's consumer products segment, which contributed 12.1% of 1Q26 total revenues (figure 2), to increase its share through established brands such as Realfood and Momiku in ready-to-drink (RTD), ready-to-eat (RTE), and powdered beverage categories. Looking ahead, we expect further growth to stem from ongoing product innovation, including jelly-based products, chicken broth, collagen drinks, and other protein-rich health offerings. Management plans to enter Vietnam in 2026F and also expands into the US and Philippines markets, providing additional support for medium-term growth.

Stronger 2Q26F performance amid post-Lebaran normalization & IDR depreciation. We project RLCO's revenue to reach IDR 159bn (+21.7% YoY; +109.4% QoQ) and net profit to rise to IDR 14bn (+31.9% YoY; +346.2% QoQ), helped by export sales (83.5% of 2025 revenues) in line with the recent IDR weakness as well as post-Lebaran recovery. In 1Q26, RLCO recorded revenues of IDR 92bn (-3.5% YoY) on weaker consumer goods sales, down to IDR 11bn (-18.9% YoY) amid seasonality due to Lebaran timing shift. However, processed nest sales remained relatively resilient at IDR 81bn (-0.9% YoY), supported by steady export demand from key overseas markets. On profitability, gross margin contracted 122 bps YoY to 22.6%, mainly due to unfavorable sales mix as contribution from higher-margin consumer goods segment declined to 12.1% of top-line (1Q25: 14.4%). Combined with higher opex-to-sales ratio of 11.0% (1Q25: 9.9%), operating margin weakened to 11.6% from 14.0% in 1Q25. Nevertheless, net profit rose to IDR 3bn (+166.7% YoY), translating to NPM of 3.3% (1Q25: 1.2%), primarily driven by one-off pro-forma adjustment in 1Q25.

Margin expansions to drive normalization in valuations ahead. Based on our calculation and management's guidance, RLCO's current EV reaches IDR 14.3tn which we expect to rapidly expand given strategic focus on greater higher-margin consumer products portfolio. This will be accomplished through broader export footprints into Vietnam, the Philippines, and the US, as key drivers of medium-term earnings growth. Additionally, plans for new fish processing expansion in 2027F is expected to provide additional growth avenue. As contribution from consumer goods will gradually increase, we expect profitability to rapidly rise through margin expansions, supporting stronger earnings delivery, bringing valuations to more normal levels onwards. Key risks: unfavorable product mix, weaker purchasing power, and stronger IDR:USD rate.

Figure 7. Milestones

Year	Achievements
2014	The company was established under the name PT Abadi Lestari Indonesia on August 2014.
2016	The company commenced operations as an exporter of raw edible bird nest to international markets.
2017	Obtained ISO 22000 certification, strengthening its food safety management system.
2018	Secured GACC (General Administration of Customs of China) certification, enabling exports of edible bird’s nest products to the Chinese market.
2022	Received FDA approval, enhancing global credibility and expanding access to international export markets.
2023	Launched powder-format products and obtained FSSC 22000 certification, reaffirming compliance with international food safety standards
2024	The company diversified its business into poultry-based protein sources, broadening product formats and expanding its health-focused product portfolio
2025	Conducted an Initial Public Offering (IPO) and its shares were officially listed on the Indonesia Stock Exchange under the ticker RLCO.

Source: RLCO, SSI Research

In December 2025, the company made its debut on the Indonesia Stock Exchange under the ticker “RLCO”

PT Abadi Lestari Indonesia Tbk began operations in 2016 as a raw edible bird’s nest exporter and has since grown into one of Indonesia’s leading players, with export markets spanning China, the United States, and other international destinations. In line with shifting consumer preferences and rising demand for health-oriented products, the company has transformed its business model from purely raw exports to producing value-added health and functional food products. Its portfolio now extends beyond premium bird’s nests to include chicken broth, collagen, and other natural protein-based innovations, offered in formats such as ready-to-drink (RTD), ready-to-eat (RTE), and powdered beverages. Additionally, the company manages several prominent brands, including Lion Nest, Jade Nest, Realfood, and Momiku, catering to both domestic and global consumers. To support its operations, Abadi Lestari currently operates three production facilities strategically located in East Java, ensuring scalability, quality control, and export readiness.

Figure 8. Semi-Processed Bird Nest

Sources: RLCO, SSI Research

Through its 93.75% stake in Realfood Winta Asia (RWA), the company oversees downstream product lines in RTD, RTE, and powdered formats under well-established brands. With annual capacity of over 9mn units, RWA manufactures functional consumer goods such as jellies, jars, and powdered supplements. Amid rising demand in the beauty and wellness sector, RWA is positioning to penetrate new export destinations such as Vietnam and Thailand. These initiatives are expected to expand its market reach and serve as an incremental driver for margin expansion and overall profitability in the coming years.

The company has evolved from a raw bird nest exporter into one of the leading producers of health-focused, value-added functional food products under brands like Realfood and Lion Nest

RLCO produces three distinct brands of semi-processed edible bird’s nest with exports currently mostly concentrated in the Chinese market

RLCO has entered the Chinese market with its semi-processed bird nest products and is expanding into Thailand and Vietnam in 4Q26F as well as the U.S. and the Philippines in the medium term to further broaden its international presence

Valuation

We constructed 10-year DCF model using WACC of 7.9% and a terminal growth rate of 4.0%. The WACC was derived from 6.3% risk-free rate, 7.0% equity risk premium, 0.6x beta, and after-tax cost of debt of 6.2%.

Figure 13. DCF Assumptions

DCF Assumptions			
Risk Free Rate	6.3%	Cost of Debt	8.0%
Equity Risk Premium	7.0%	Tax Rate	22.0%
Beta	0.6	After Tax Cost of Debt	6.2%
Cost of Equity	9.0%		
Proportion of Equity	61.7%	WACC	7.9%
Proportion of Debt	38.3%	Terminal Growth	4.0%

Sources: RLCO, SSI Research

Based on management’s long-term expectations for 2026–35F, we derive an implied enterprise value of IDR 14.7tn, which we expect to rapidly expand given strategic focus on greater higher-margin consumer products portfolio ahead. At the same time, RLCO currently trades at 219.3x FY26F P/E (vs. peers at 137.8x) and 30.8x FY26F P/B (vs. peers at 18.7x), which we expect future valuations to rapidly contract on the back of rapid earnings growth.

Notably, RLCO’s expansion into fish maw in 2027F and potentially other business segments broaden its addressable markets beyond traditional EBN consumption, creating additional avenues for long-term earnings growth. On the fish maw front, the company established PT Marinova Protein Internasional (MPI) in Jan-26 under PT Realfood Winta Asia to undertake the processing and trading of fishery products. We expect MPI to initially operate under an asset-light trading model, sourcing dried fish maw from domestic fishery networks for grading, packaging, and re-export. Management views fish maw as an attractive growth opportunity, supported by global demand growth of c.8–10% CAGR through 2027F.

Looking ahead, the management expect the contribution from higher-margin consumer products to gradually increase within RLCO's revenue mix. Alongside with the company's expansion into premium wellness categories, this should support margin expansion and stronger earnings growth over the medium term, bringing valuations to more normal levels onwards.

We constructed 10-year DCF model...

...applying WACC of 7.9% and a terminal growth rate of 4.0%

Sustained growth beyond EBN to rapidly raise future earnings growth

RLCO is strategically diversifying into fish maw and other business segments,...

...broadening its addressable markets beyond EBN and reinforcing medium-term earnings growth that should drive gradual normalization in valuations

Industry Overview

Global consumers are shifting from cautious to more intentional spending behavior amid persistent uncertainty surrounding economic stability, inflation, and personal financial resilience. In 1H25, the proportion of consumers who feel “worse off” increased to 32.8% (FY24: 31.8%), while those who feel “better off” declined to 30.0% from 30.4% in January 2025. Although consumer confidence has modestly improved in certain regions, households remain prudent in safeguarding their savings, prioritizing essential categories and value-for-money products. Discretionary spending continues to be assessed more carefully, with consumers increasingly comparing prices, delaying non-urgent purchases, and switching to alternative brands to optimize their budgets.

Economic uncertainty is prompting consumers to spend more selectively and prioritize savings,...

Figure 16. Consumer Financial Outlook: 2022–2025 Trend

...leading them to delay non-urgent purchases and explore alternative brands to optimize budget

Source: Nielsen, SSI Research

Despite slight improvement in sentiment—with 30% of global consumers feeling better off and 33% feeling worse off in 1H25 (vs 35% in 1H23)—cost pressures remain a dominant concern. About 73% of consumers cite rising living costs as the main strain on their wallets. Beyond inflation, consumers attribute their worsening financial situation to economic slowdown (39%) and job insecurity (30%), suggesting these headwinds will continue to shape spending behavior into 2026F and beyond.

Roughly 73% of consumers expect higher living costs to keep straining household budgets for the foreseeable future

Figure 17. Top Issues Affecting Consumer Confidence, 1H25

Reasons	% of Respondents
Rising food prices	29

Households are increasingly narrowing their brand choices across several FMCG categories, reflecting more cautious spending behavior for value-oriented products

Figure 20. Surveys on Reasons for Brand Switching, 2024

Source: PWC, SSI Research

Surveys indicate that many industry executives no longer view price increases as a reliable engine of revenue growth, as further hikes risk triggering consumer resistance and materially weakening demand. Consumer resilience appears to have reached its limit, with shoppers increasingly benchmarking current prices against pre-COVID (2019) levels. Although inflation has moderated, overall price levels remain elevated, while purchasing power continues to erode. Consequently, consumers trade down, switching to lower-priced substitutes, actively seeking discounts, or exiting certain categories altogether. Against this backdrop, global FMCG companies are reassessing their price-pack architecture to protect margins while aligning more closely with consumers' growing preference for value-oriented offerings.

Value for money is now the leading driver of brand switching, as consumers prioritize affordability and perceived benefits over brand loyalty amid rising living costs

Consumers are highly price-sensitive, forcing FMCG companies to shift from price hikes to value-focused strategies to protect margins

Figure 23. Indonesia Nutraceutical Market Size, 2024–2033F

Source: Grand View, SSI Research

Indonesia's nutraceutical market is projected to grow at a 2024–33F CAGR of 7.7%, with functional beverages expected to remain the largest segment, accounting for c.47.9% of the market

In 2024, Indonesia’s swiftlet nest exports continued their strong momentum, recording a 10-year CAGR of +15.7% (2014–2024). This growth has been driven by the rising popularity of edible bird’s nest among younger consumers in China, with total sales increasing by +50% annually in 2019, and 60% of purchases made by consumers aged 16–35. This trend aligns with the global increase in spending on wellness-focused F&B products, as urban consumers increasingly seek convenient ready-to-drink (RTD) and value-added formats of traditional health products. Notably, approximately 58% of the world’s edible bird nest supply is expected to be sourced from Indonesia. In terms of trade demand, more than 85% of Indonesia’s edible bird nest exports are destined for Hong Kong and China.

Indonesia’s swiftlet nest exports, supplying ~75% of the world, grew at a 10-year CAGR of +15.7%, driven by young Chinese consumers and wellness trends
